

## **Senior Java Developer**

**@Zyapaar [[www.zyapaar.com](http://www.zyapaar.com)]**

**Employment Type: Full-time**

**Location: Ahmedabad, Gujarat**

**Apply within: 30 days**

**Salary: Depends on the interview**

**Experience: 2-3 years**

### **Brief about the position**

Zyapaar is looking for a Senior Java Developer to manage the SDLC, from planning and prioritizing to testing and rapid delivery.

You will be part of our development team that works on business applications. As a Senior Java developer team member, you have to contribute to the design and development of an application. You have to take part in the end-to-end stages of the development lifecycle.

### **Roles & Responsibilities**

Senior java developer is a computer programmer with an extreme level of experience and all required skills. They build a java-based application and software. They perform certain types of tasks such as coding, bug solution, and designing, and provide a path of the solution to junior java developers.

Every role comes with responsibilities and the employees have to justify those responsibilities. Following are some crucial responsibilities senior java developers are entitled to.

- Senior Java developers have to analyze and assess the business needs of the client to find the best solution for the client. Overall strong analytical and problem-solving skills are highly important for this role.
- Senior Java Developer responsibilities include gathering system requirements, building application specification documents, drawing flow charts, designing application architecture and implementing modernized application design and testing features before release.
- You should have hands-on experience in developing software with agile or scrum methodologies and are ready to lead our junior developer's team.
- You should have an innovative thought process and creative thinking which can bring out-of-the-box and alternate ways of system implementation.
- Ensure applications must be secure and up-to-date.
- To interact with the customer and internal teams in Identifying and analyzing requirements for development purposes.
- To perform activities related to the creation of documents for client requirements.

- Prioritizing the task and executing tasks throughout the SDLC.
- Provide technical help to junior developers.

### **Skills and Requirements**

- You should have experience with Object-Oriented Design.
- In-depth knowledge of popular Java frameworks like JSF, and Spring MVC.
- Positive and professional approach at all times.
- Familiar with SQL or NoSQL databases like MySQL, and MongoDB.
- Experience with large and disparate data sets.
- Creating Web Services and RESTful services with Web API.
- Familiar with Open-Source tools
- Have hands-on experience with Linux/Window Server deployment
